

Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	19 October 2022
Team ID	PNT2022TMID04665
Project Name	SMART FARMER - IOT ENABLED SMART FARMING APPLICATION
Maximum Marks	4 Marks

Technical Architecture:

- The different soil parameters temperature, humidity and then soil moisture are sensed using different sensors and obtained value is stored in the IBM cloud.
- Arduino UNO is used as a processing Unit that process the data obtained from the sensors and weather data from the weather API.
- NODE-RED is used as a programming tool to write the hardware, software, and APIs. The MQTT protocol is followed for the communication.
- All the collected data are provided to the user through a mobile application that was developed using the MIT app inventor. The user could decide through an app, whether to water the crop or not depending upon the sensor values. By using the app, they can remotely operate the motor switch.

Table - 1: Components & Technologies:

S. No	Component	Description	Technology
1.	User Interface	How user interacts with application e.g. Mobile App/web.	MIT App Inventor/ Node-red Dashboard
2.	Application Logic-1	Logic for a process in the application	Python
3.	Application Logic-2	Logic for a process in the application	IBM Watson IOT service
4.	Application Logic-3	Logic for a process in the application	IBM Watson Assistant
5.	Database	Data Type, Configurations etc.	MySQL, NoSQL, etc.
6.	Cloud Database	Database Service on Cloud	IBM Cloud
7.	File Storage	File storage requirements	IBM Block Storage
8.	External API-1	Purpose of External API used in the application	IBM Weather API
9.	Infrastructure (Server / Cloud)	Application Deployment on Local System / Cloud Local Server Configuration: Cloud Server Configuration:	Kubernetes

Table-2: Application Characteristics:

S. No	Characteristics	Description	Technology
1.	Open-Source Frameworks	MIT App Inventor, Node-Red	MIT App Inventor, Node-Red
2.	Security Implementations	Sensitive and private data must be protected from their production until the decision-making and storage stages.	Node-Red, Open weather App API, MIT App Inventor
3.	Scalable Architecture	Scalability is a major concern for IoT platforms. Scalability has been shown that different architectural choices of IoT platforms affect system scalability and that automatic real time decision-making is feasible in an environment composed of dozens of thousand.	IBM Watson IOT Platform
4.	Availability	Automatic adjustment of farming equipment made possible by linking information like Moisture, temperature and humidity.	IOT, MIT App
5.	Performance	The idea of implementing integrated sensors with sensing soil moisture and environmental Parameters in farming will be more efficient for overall monitoring.	IOT, MIT App
